All levels of government around the world are adopting OpenSource technology.

Please take a few minutes to review this page, related articles and view our short videos… Understand the Government OpenSource movement.

Providing Tier1 OpenSource System Infrastructure is what we do.
We are 100% proudly Canadian owned and operated.
…and we're one of Canada's most experienced OpenSource integrators.

Providing Federal, Provincial and Municipality governments with diverse OpenSource solutions is our core business.

Our internal team's experience brings new engaging ideas to the table, and prevents costly technology shortcomings and eliminates expensive licensing fees. All our projects revolve around our skilled in-house staff:

- Senior OpenSource Infrastructure Architects & Consultants
- IT Project Managers and Trainers
- Registered Graphic UI Designers
- Certified Programmers

Providing our clients with diverse OpenSource solutions allows us to look at the bigger picture, and help forecast other elements which can be engineered into our clients' business processes. We strategise with all our clients - which is what makes our relationship work!

Although we do lots of Custom OpenSource Application Development, Vurtur is very experienced in OpenSource Product/Platform Solutions, namely:
Plone | Joomla | Drupal | CiviCRM | SugarCRM

- Intranet Portals
- CMS (Content Management System)
- CRM (Customer Relationship Management)
- Document Management & Publishing Solutions

- Custom application development
- Collaborative Systems & Social Media Integrations
- Knowledge Management Systems

We know, we know… It has to be:

Scalable | Adaptable | Extendable | Secure | Robust | Powerful … and oh ya, license free ;)

Don’t just contact us because it’s drastically cheaper than Commercial Software… find out why these tools are often better.
